Reasons for Allowance

The patents to Nied et al. (4,596,917) and Ferguson (4,734,555) are cited to show prior art resistance welding arrangements wherein electrode displacement is monitored. The patent to Rossi is cited to show a prior art resistance welding arrangement with monitoring of electrode displacement and electrode force.

Applicant is to note that in the "Information Disclosure Statement" (IDS) filed on 8/25/2003, the patent no. 5,251,828 has been marked through as "not considered". This patent is directed to subject matter unrelated to the instant invention and the patent number does not correspond to the inventor's name or to the patent date listed on the PTO-1449 of the IDS. It is clear that the listing of 5,251,828 is the result of a typographical error. Examiner has rectified this situation by listing patent no. 5,254,828 to Stiebel on the attached form PTO-892. This patent discloses a resistance welding control system wherein indentation is monitored and is clearly the patent applicant intended to cite.

The following is an examiner's statement of reasons for allowance: none of the prior art of record discloses a resistance welding method with all of the claimed steps, particularly the steps of comparing measured electrode force and displacement values with target values and altering welding current in the manner set forth in independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
